

We have 3 approved vaccines.

Pfizer-BioNTech

Moderna

AstraZeneca

All three vaccines are safe and very effective in preventing hospitalization and death, this is what is important.

The government of Ontario will distribute vaccines with the goal to protect as many people in as short as time possible starting with those that are most vulnerable. They will follow the advice of the experts.

The best vaccine is the vaccine that is in your arm.

We are directed by the TBDHU on who we can vaccinate when. TBDH receives their guidance from the Ministry of Health. We will update as more information becomes available to us.

Currently we do not know when our next vaccine clinic will, and we have not been given any guidance regarding the most recent recommendations to extend the time between doses to 4 months. What we do know is that this recommendation allows for more people to be partially protected, which is better for the overall population.

Between writing this and posting, we have had the fourth approved. Johnson & Johnson was approved today. This is all good news!!
